

ALL GREEN:

CSV:

Root 7:

er

ares two columns by their attribute value pairs
ows the confusion matrix, i.e. how many rows
ch attribute and their classification match.
onally, it is possible to hilight cells of this matrix
ermine the underlying rows. The dialog allows
select two columns for comparison; the values
the first selected column are represented in the
sion matrix's rows and the values from the
id column by the confusion matrix's columns.
utput of the node is the confusion matrix with
mber of matches in each cell. Additionally, the
id out-port reports a number of accuracy
tics such as True-Positives, False-Positives,
egatives, False-Negatives, Recall, Precision,
tivity, Specificity, F-measure, as well as the
ll accuracy and [Cohen's kappa](#).
